Some sites display releases longer than others; links will expire as sites rotate their content.

*Site metrics are collected at a domain level. For example, Google and Google News share google.com as a domain and so would have a single visitors/day ranking. Similarly, groups of news websites that share a domain will show the same visitor statistics since they cannot be separated into discrete numbers.

Forwarding a ReleaseWatch report can cause the links to be broken by your email program. If your email system adds spaces or characters to offset forwarded text, the links may not work for the person to whom you are forwarding the report.
